

The STAR winter benchmarking has concluded in the Garfield Heights City Schools!

Students throughout the district have completed an online assessment indicating their level of proficiency in math and reading. As the year progresses, students will continue to take the STAR test, providing us with additional data points to compare. STAR data helps teachers and administrators plan for programming, select appropriate interventions, and determine who may be successful on State Tests. Please see the graphs below for information on specific schools. We will continue to update benchmarking data throughout the school year.
